

## 2. Back of Wall Wiring Access for your Signage Project

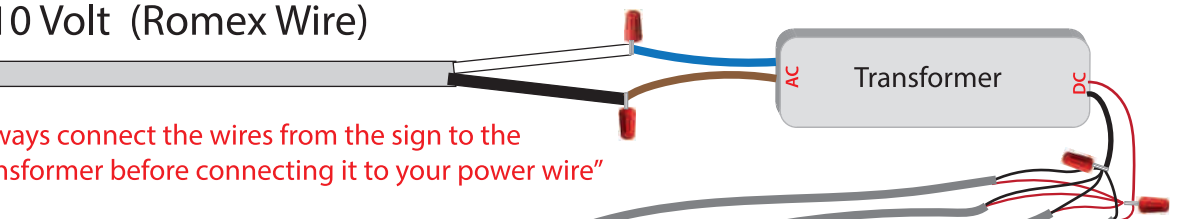

Wiring on the other side of the wall from your signage project can be done inside the wall (if the wall is an office or meeting room), or if its a wall for a storage area (then you won't need to hide the wires ) as shown below.

Wall Access Panel Sample  
(if wires are inside the wall)

110 Volt (Romex Wire)

"always connect the wires from the sign to the transformer before connecting it to your power wire"

# SIGN

Our most common transformers we use for LED Illuminated Signage Projects
